Professional Summary

Senior Data/AI/ML professional, 23 years in. Track record of taking ambiguous problems through design, delivery and the unglamorous operational work that follows. I mentor deliberately and write things down. Core stack: AWS, Scikit-learn, Kafka.

Employment History

2009–Present	Data Scientist Uber – Trained and deployed TensorFlow models serving 12M predictions per day at under 180ms p95. – Cut inference cost by 55% through quantisation, batching and autoscaling on Linux. – Wrote the team's model documentation and review standard, now required before any production launch. – Reduced label noise by redesigning the annotation guidelines, improving validation accuracy by 40%. – Ran A/B tests across 3 model variants; the winning variant added an estimated \$30k in annual revenue.
2005–2008	Applied Scientist Northbridge IT – Translated ambiguous business questions into a modelling roadmap with product and finance stakeholders. – Built an end-to-end training pipeline on Databricks, cutting retraining from days to 8 hours. – Migrated ad-hoc notebooks into versioned Python pipelines with reproducible runs and tracked experiments. – Productionised demand forecasting models that reduced stock-outs by 60% across 10 regions.
2003–2005	Data Scientist Adobe – Lifted recommendation click-through by 40% through feature engineering and retraining cadence in NumPy. – Established offline/online evaluation parity, catching 50 silent regressions before release. – Mentored 50 analysts moving into modelling work, with weekly paper reading and code review.
